## PROFESSIONAL SUMMARY

Software Developer with over 5 years of experience specializing in B2B environment building enterprise applications. Experienced in designing scalable Spring Boot applications, integrating distributed systems, and delivering business-critical applications that support complex operational workflows. Adept at navigating the entire software development lifecycle, collaborating with cross-functional Agile teams, and delivering user centered solutions that drive business growth and enhance user experiences. Adopting AI-assisted development tools and shared coding standards, reducing repetitive boilerplate work while maintaining code quality.

## TECHNICAL SKILLS

|                                |                                                                                                             |
|--------------------------------|-------------------------------------------------------------------------------------------------------------|
| Languages                      | : Java   Python   JavaScript   Typescript                                                                   |
| Frameworks                     | : Spring Boot   Hibernate   React   Bootstrap   Node.js   Selenium   Fast API                               |
| Web Technologies and APIs      | : REST API   JSON   XML   jQuery   GraphQL                                                                  |
| Databases                      | : PostgreSQL   MySQL   JPA   JDBC                                                                           |
| Messaging Technologies         | : Kafka   ActiveMQ   RabbitMQ                                                                               |
| Build, Version control & CI/CD | : Git   Gitlab   Maven   Gradle   Docker   Team city   Jenkins   Kubernetes                                 |
| Security                       | : Blackduck   Fortify   Vault   OAuth   JWT                                                                 |
| Cloud                          | : GCP   AWS (S3, ECS, EC2)                                                                                  |
| Applied AI                     | : LLMs   Retrieval-Augmented Generation (RAG)   LangChain   LangGraph   Prompt Engineering   GitHub Copilot |
| Tools & Technologies           | : Datadog   Redis   Solr   Jira   Confluence   IntelliJ   VS Code   Eclipse   Postman   Ansible             |

## WORK EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                            |

| <b>Intelligent Document Processing Platform</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Technologies:</b> Java, Spring Boot, Spring Security, PostgreSQL, React, TypeScript, Tesseract OCR, Gemini API, Docker                                                                                                                                                                                                                                                                                                                                                                               |
| <ul style="list-style-type: none"><li>Developed a secure document management platform supporting document upload, AI-assisted information extraction, and approval workflows.</li><li>Designed RESTful APIs with JWT-based authentication and role-based access control to securely manage document upload, review, and approval operations.</li><li>Automated OCR-based text extraction and AI-driven field extraction, reducing manual document review and improving processing efficiency.</li></ul> |

## EDUCATION

Master of Science (M.S.), Advanced Data Analytics | GPA: 3.9  
University of North Texas, Denton, TX | May 2025

## RECOGNITIONS FROM MANAGERS

---

- **Thumbs up award** - Well Done – Appreciating the efforts for taking the additional tasks and for providing Knowledge transfer sessions for team members and Product management team.
- **High five award** - Appreciate your work!! - Recognized for exemplary ownership and commitment in task management

## CERTIFICATIONS

---

- [Hewlett Packard Enterprise: Software Engineering Job Simulation by Forage](#)
- [JPMorgan Chase & Co: Software Engineering Job Simulation by Forage](#)
- [Front-End Web UI Frameworks and Tools: Bootstrap4 by Coursera](#)
- [Introduction to Data Analysis Using Excel by Coursera](#)
- [Certification in Java by HackerRank](#)
- [Certification in Python by HackerRank](#)
